CATALOG No. 26

At a fraction of the cost of ornamental plastering, excellent effects can now be obtained with Milcor Invisible Joint Metal Ceilings — Artistic, Firesafe and Economical.

MILCOR
"Invisible Joint"
TRADE MARK

Metal Ceilings are Gaining Favor

There is no adequate substitute for well designed metal ceilings and walls. For beauty, firesafeness, general safety, economy of erection and freedom from maintenance expense, no other type of ceiling or wall is quite so satisfactory. They are permanent, sanitary and can be kept clean and bright more easily and at less expense than anything else.

So it is not surprising to find that the popularity of Milcor "Invisible Joint" Metal Ceilings has been steadily increasing, year after year, for nearly a quarter of a century. Even though other types of ceilings and walls have been promoted most aggressively and marketed very efficiently, the use of Milcor Metal Ceilings has grown greater and greater. Builders who are familiar with the true merits of Milcor Ceilings and who know what fine, artistic effects can be produced with them, have adapted them to every class of structure from homes to skyscrapers.

Proper consideration for artistic effects and for the established traditions of architectural design are largely responsible for the recognition that has been accorded these good ceilings by architects, contractors and owners. The best thought and skill of the most accomplished designers and artisans in ornamental metal, are embodied in each Milcor unit. The motifs are authentic, their detail correct, their treatment finished.

Ornamental plastering and intricate stucco effects have been faithfully reproduced in metal. Such varieties of designs and combinations are available that the most discriminating critics of interior architecture can be satisfied. Many of the Milcor designs are conservative and impart real dignity to the rooms in which they are used. Then, too, there are the more elaborate designs — a wide range of architectural motifs from which to satisfy any preference or meet any requirement.

This catalog expresses, in a measure, our faith in the practicability and the growing popularity of Metal Ceilings and walls. It also expresses our faith in the good judgment of architects, contractors, and owners, who, in constantly increasing numbers, are recognizing the true value and superiority of Milcor "Invisible Joint" Metal Ceilings and Walls.

A. H. Miller, President,

Milwaukee Corrugating Company

This Famous **"Invisible Joint"** Feature Has
Contributed Greatly to the Success of
MILCOR,
Metal Ceilings and Walls

Before the invention of the "Invisible Joint" by Milcor engineers, it was extremely difficult, if not altogether impossible, to erect metal ceilings in a manner that would conceal the joints between the various units. It required much painstaking labor to accomplish even a fairly neat job. Erection costs were, therefore, high and most installations had a rather crude appearance.

But when the Milcor "Invisible Joint" was perfected, it was an easy matter for anyone to do better work than the best experts could do before that time. Each plate now lines up perfectly, lapping seams are automatically concealed, and the work of erection is greatly simplified because only one nail is required where the four corners of each plate overlap.

The beads are re-pressed, so that they fit snug and true. Perfect alignment and finely finished appearance are thus assured. The nail holes are die cut and accurately placed by precision machinery, so that each nail hole in the corner of any field plate, or any other unit, will match exactly in location, size and shape, the hole in the corner of any other unit of a similar design.

Then, too, the snug fit of Milcor Invisible Joint units eliminates the possibility of dust sifting through from the floor above, which formerly was a common objection to ordinary metal ceilings.

It is because of the precisely re-pressed beads and die-cut nail holes, that Milcor Invisible Joint Metal Ceilings can be erected so quickly and economically. Workmen endorse these features because they eliminate danger of bruising the fingers and because fine looking jobs invariably result — worthy of any craftsman who takes pride in his work.

"Lock-Joint" Plates
also available in Milcor Ceiling Designs

The Milcor "Lock-Joint" Ceiling Plate is another very practical type of design, especially desirable under certain conditions. Where joists are spaced on 24-inch centers, wood furring strips are not needed when Milcor "Lock-Joint" Plates are used. The illustration above shows how the lock-joint is formed.

If joists are spaced on 24-inch centers, nailing along two parallel edges of the plate is all that is required, because the lock-joint on the other two edges is sufficient without any nailing there. Erection is very simple and demands compara-

tively short time and a minimum amount of labor.

Milcor "Lock-Joint" Ceilings present a very pleasing appearance when erected. There are no nail holes or nail heads exposed — they are all covered by the lock seam. "Lock-Joint" Ceiling units fit snugly into each other and thus positively prevent any possibility of dust sifting through from the floor above.

Milcor "Lock-Joint" Ceiling Combinations are shown in this Book on Pages 32, 33, 76, and 77.

Milcor "Lock-Joint" Individual Plates are shown on Pages 181, 182 and 272.

Special Ceiling Plans

Special layouts and detailed plans for interiors for any type of building will be furnished gladly on request, without cost or obligation. We maintain an extensive organization and the most modern equipment to render service of this sort. Do not hesitate to make use of this service.

With our complete facilities for molding the original models, making the dies and producing the units in metal, we are in ideal position to furnish special designs in case none of our stock patterns suit the requirements. All special work is handled promptly and at minimum expense.

Directions for Applying *MILCOR "Invisible Joint"*

Metal Ceilings and Side Walls

A blueprint working drawing showing the arrangement of the various plates, is furnished with every ceiling. Itemized packing sheets giving quantity and catalog number and size of the material are also included.

The first thing to do when a shipment arrives is to check the number of packages with the bill of lading. The contents of each package should then be checked and counted against the packing sheet.

Check the measurements on the blueprint with the building. If any material is short in the crates, or the blueprint does not agree with the building, notify us at once before you start to erect the ceiling. After the material and blueprint are carefully checked, proceed as follows:

If possible, it is best to scaffold the whole room, but a movable scaffold may be used.

When ceiling is boarded or sheathed most of our designs can be applied directly to the sheathing. If the ceiling is plastered, wood furring strips must be employed, with exception of Plate No. 1200, shown on page 271, as it is not practical to apply other designs direct to lath or plaster. It is not necessary to remove old plaster, as the wood furring strips will hold it in place. If plaster is loose, extra strips should be placed where necessary.

Follow the blueprint carefully and observe the starting point and center line. The starting point is not always on the center line. Great care must be taken to make sure that the center line is in the exact center on both ends, as well as the middle of the room. Many rooms vary on the ends, so it is best to get the exact center on each end and strike a chalk line. This should be done lengthwise as well as crosswise of the room.

Observe whether plates start on the center line or not. If not, measure the proper distance on side of center line, and if wood strips are used, center the strips on this line. You then have the starting line one way of the building. The same operations are necessary the other way of the building.

On the plan, find the location of the starter plate. Observe the exact distance from the rear wall, and then, with the location of the starting line, you are ready to apply the field plates.

How to Estimate Area of Ceiling

It is important to follow these instructions carefully in estimating the area of ceilings:

Add to the length of the room the depth of the cornice plus 2 inches for filler lap on both ends or wherever used.

Multiply this by the sum of the width of the room, depth of the cornice and 2-inch filler lap where used. For example: A room 26 x 54 feet, with 12-inch cornice on sides and ends, is figured as follows: (See columns to the right.)

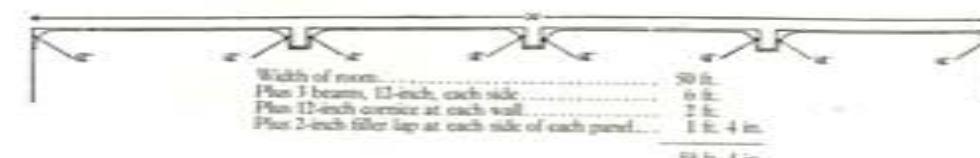

Length.....	54 feet
Plus 12-inch cornice on two ends.....	2 feet
Plus 2-inch filler lap on two ends.....	4 inches

Width.....	26 feet
Plus 12-inch cornice on two sides.....	2 feet
Plus 2-inch filler lap on two sides.....	4 inches

28 feet 4 inches

28 feet 4 inches X 56 feet 4 inches = 1596 square feet
--

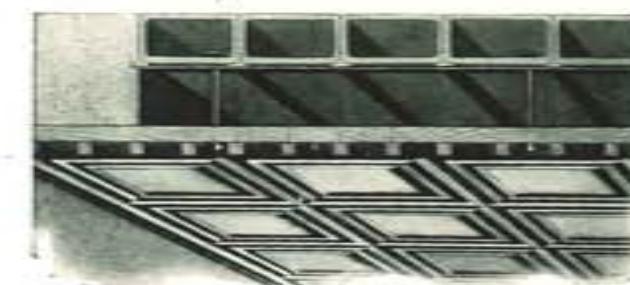

If rooms contain beams that must be covered, add for them as follows:

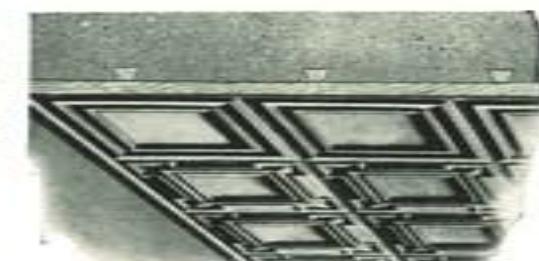

Our quotations and estimates will always include all sheet metal shown in the design specified, with one wood bracket cut to the profile of the cornices and moldings at

each lapping joint. The shipping weight of Milcor "Invisible Joint" Steel Ceilings is 65 lbs. per 100 square feet, crated. Accepted as fourth-class transportation rates.

Methods of Applying Metal Ceilings to Concrete Construction

Method No. 1

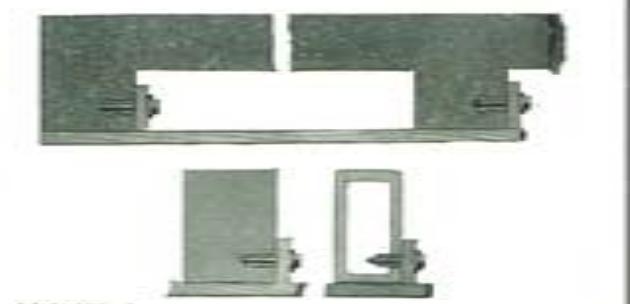

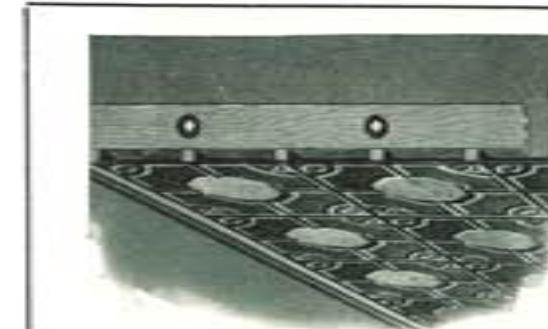

Method No. 2

Method No. 2

shows application of metal ceiling to concrete keyed wood strips, imbedded in the concrete when the floor is poured. $\frac{3}{4}$ by $1\frac{1}{4}$ -inch wood strips are nailed crosswise to the keyed strips, either 6 or 24 inches on center, according to the design.

Method No. 1

shows application of metal ceiling to building with concrete beams and book tile ceiling or roof. Toggle bolts are used to fasten the rods to the tile. $\frac{3}{4}$ by $1\frac{1}{4}$ -inch furring strips are fastened to these bolts to suspend the ceiling the proper height and regular furring strips applied crosswise, either 6 or 24 inches on center, according to the design. See illustration above.

Method No. 3

No. 3 shows method of attaching metal ceiling to the concrete beams. By this method high ceilings can be brought down even with the bottom of the beam.

Send Us Plans

and we will submit blueprints showing the best method of covering. We have made a study of this subject, so can furnish complete plans and practical information.

Methods of Measuring Rooms for

MILCOR
"Invisible Joint"
TRADE MARK

Metal Ceilings and Sidewalls

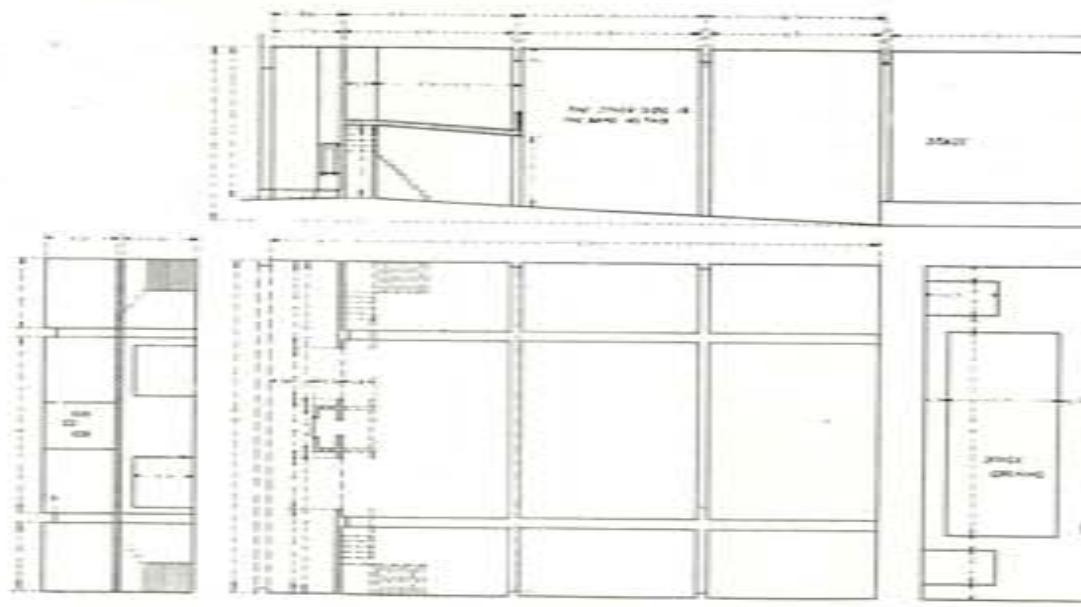

The diagrams below and on the following page indicate the various measurements needed for different styles of ceilings. Decide as to which class your room comes in, then fill in exact dimensions for all spaces as indicated by the parentheses (...). By following these fundamentals in making your measurements you will aid us in arranging appropriate combination designs. In case the room, for which you want the metal ceiling or side walls, does not conform to any of these five standards, give us complete details with blueprint if possible and we shall be glad to work out the complete estimate for you.

When sending in measurements for metal ceilings or sidewalls, include a

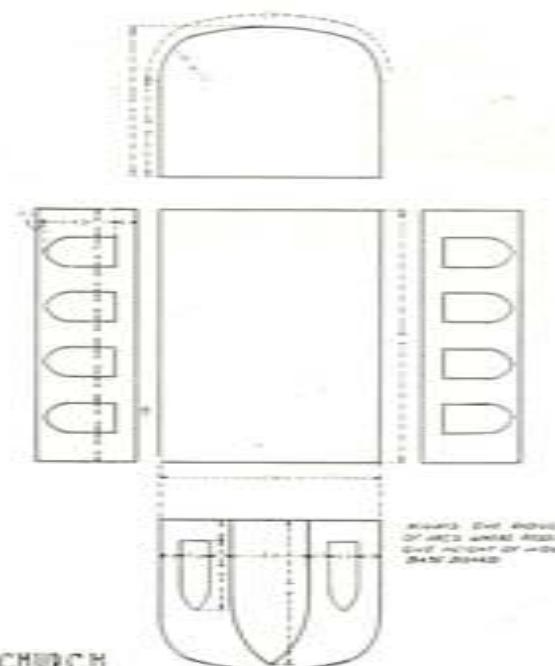

simple outline to indicate the shape and dimensions of the room. Drawings do not have to be made to scale — just give exact measurements. Of course, if you can send exact blueprints, do so, as they are more convenient for us to work with.

Be sure to indicate the exact size and location of all offsets, such as chimneys, elevators, skylight openings, beams and stairways. State whether or not cornice may be used across front of room.

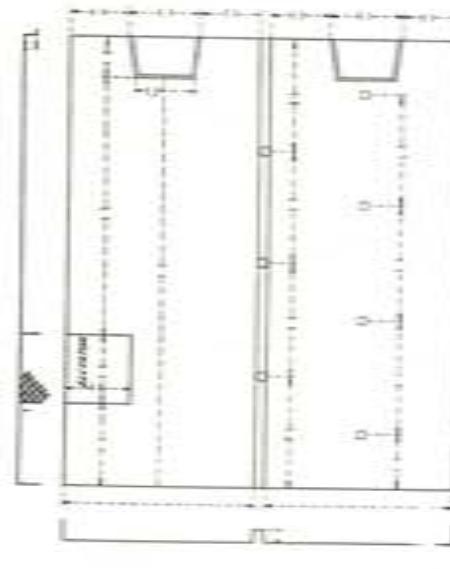

When estimating, do not make any deductions for skylight openings of less than 100 square feet, nor for stairways, chimneys or other openings or projections of less than 50 square feet.

Methods of Constructing False Beams and of Covering Steel, Concrete or Wooden Beams.

This shows a Milwaukee Special False Beam No. 2850 12 in. wide, 6 in. deep, 6 in. wide at the soffit. Beam, 30c per linear foot; Wall Beam, 22c per linear foot; Wooden Blocks 51.00 each.

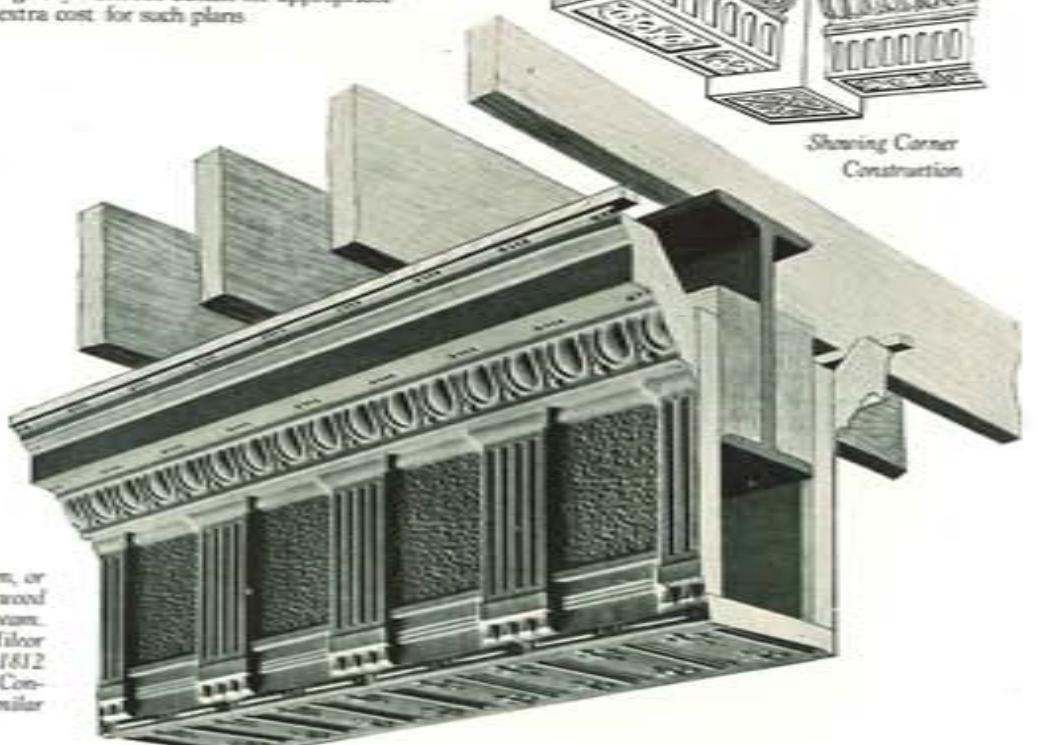

Showing Center Construction.

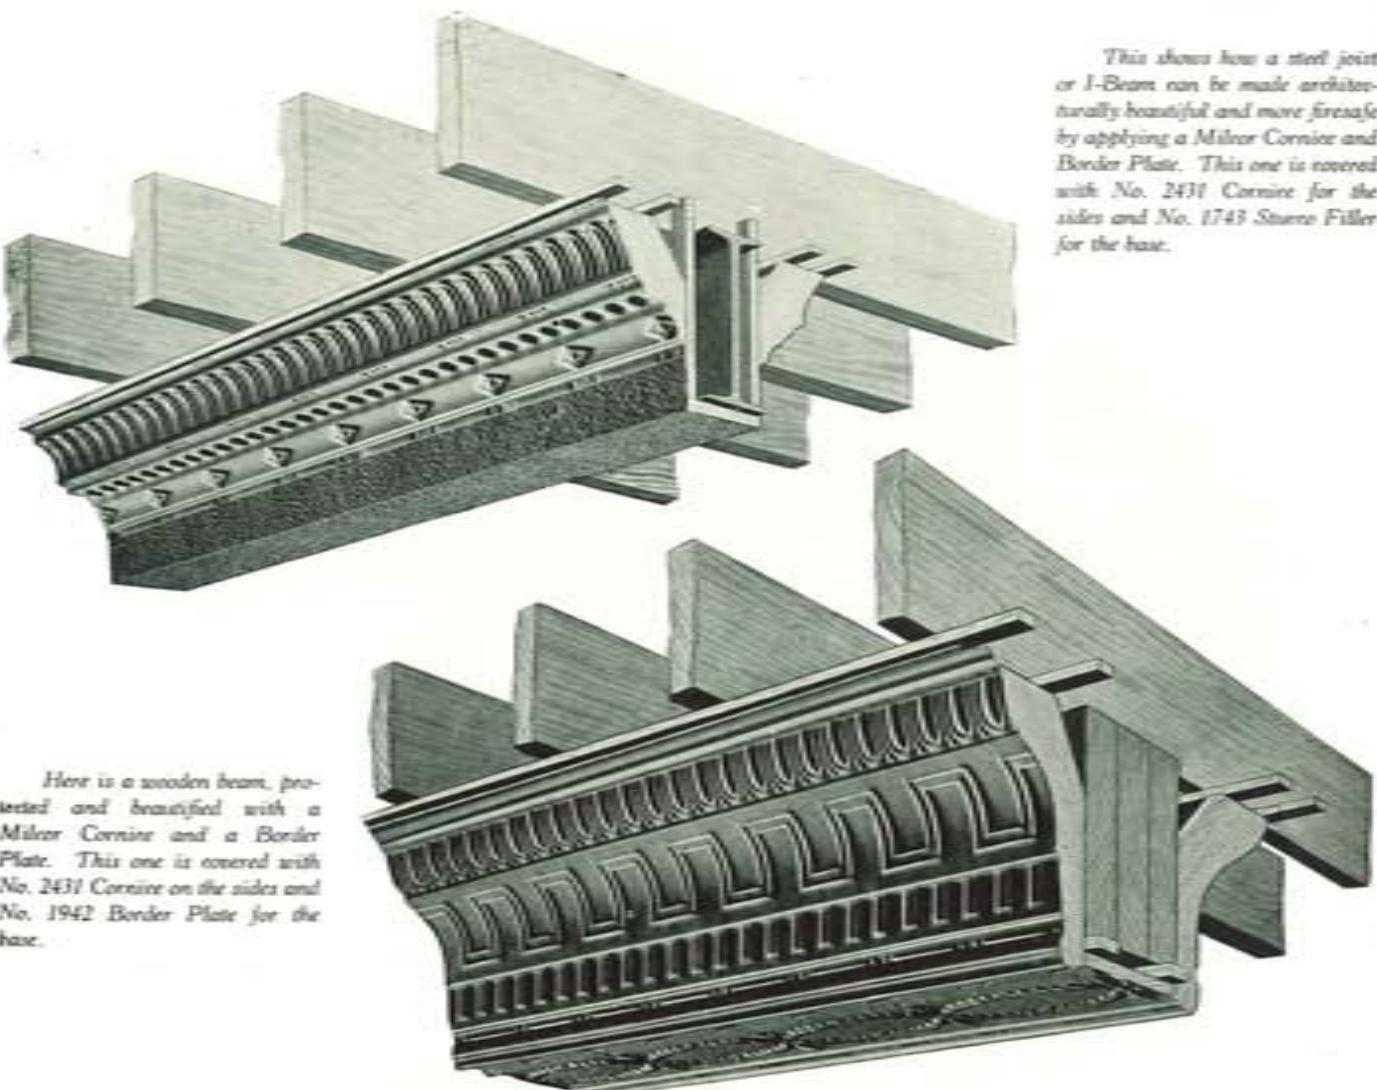

Showing Side Wall Construction.

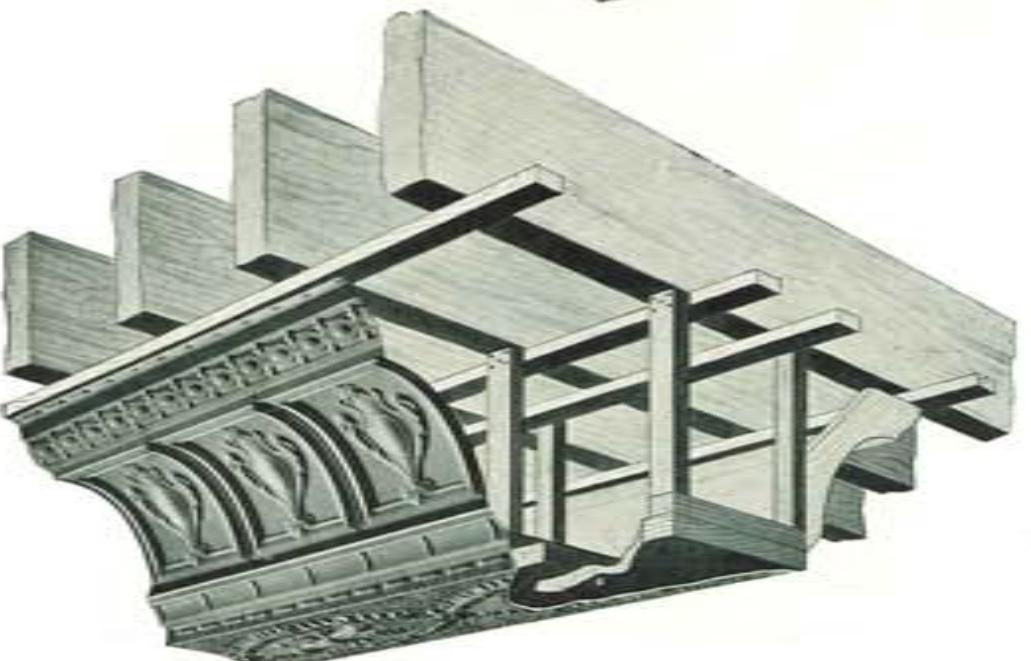

Showing Corner Construction.

This shows how a Steel Beam, or Joist, can be furred down with wood to form an attractively shaped beam. This one is covered with a Milwaukee Cornice No. 2830, with a No. 1812 Border plate used for the base. Concrete joists can be covered in similar fashion.

Here is a wooden beam, protected and beautified with a Milwaukee Cornice and a Border Plate. This one is covered with No. 2431 Cornice on the sides and No. 1942 Border Plate for the base.

This is a complete false beam, built up with $\frac{7}{8} \times 1\frac{1}{4}$ inch wood strips and a 1-inch board bottom. The sides are formed by Cornice No. 2230 and the base by No. 1940 Center Ornamentation Filler.

A Few Installations Which Show the Wide Range of Adaptability of Milcor Invisible Joint Ceilings and Side Walls.

Section No. 1

Pages 13 to 140

Combination Ceiling Designs

Countless combination designs can be assembled with the hundreds of Milcor units shown in this Book, but it is important to plan all combinations with strict regard for the architectural motif expressed in the designs.

Experience has taught us that the most practical classification of unit designs should be according to architectural Periods. So we have made up 127 authentic combinations on the following pages, to serve as suggestions.

The order in which these classifications appear is as follows:

Colonial	French Renaissance	Louis XIV
Stucco	Gothic	Miscellaneous
Venetian	L'Art Nouveau	and
Grecian	Romanesque	Residence Designs

Many variations can be arranged, of course, by using any appropriate Field Plates with other Borders, Fillers, Moldings and Cornices harmonious to the basic design chosen.

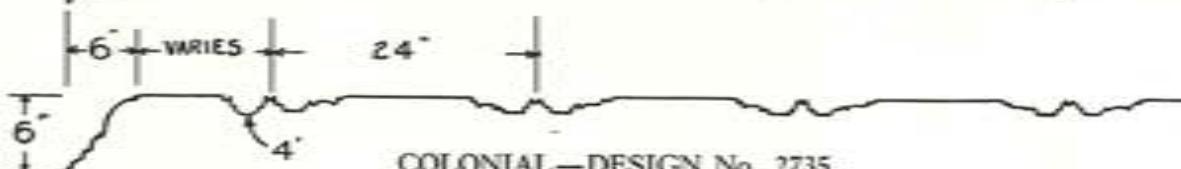

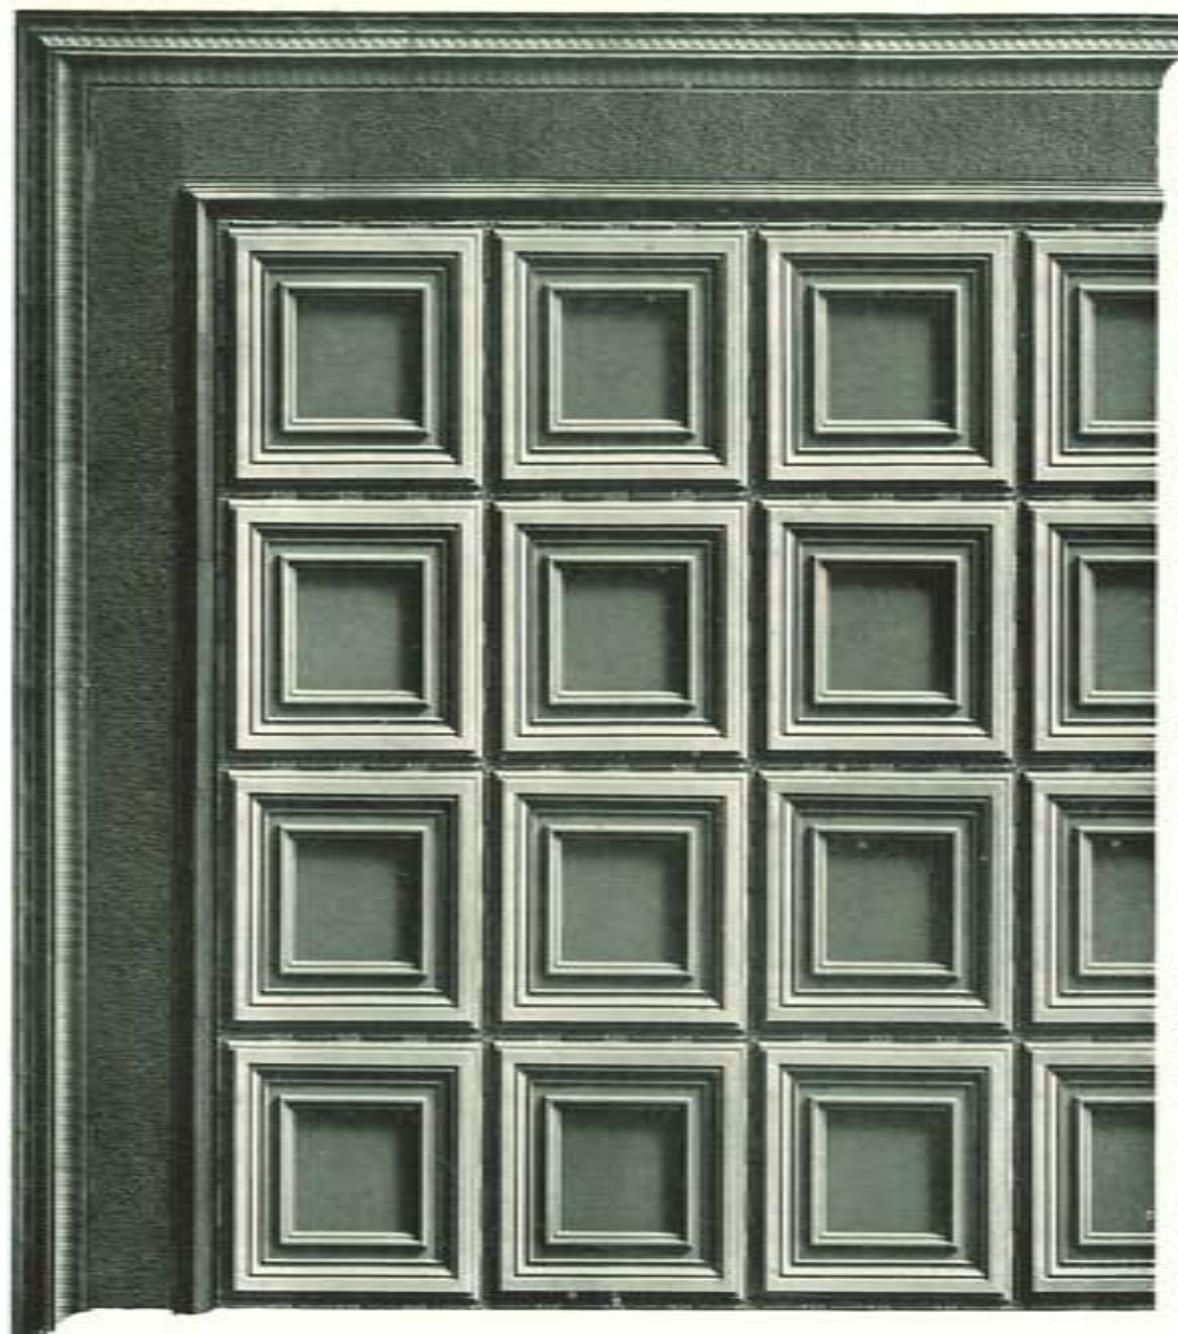

Such variety in style and design makes it easy to adapt Milcor Metal Ceilings and Walls to any conceivable type of interior. Regardless of the shape of the room, Milcor units can be arranged to fit. The exterior and interior architecture should be taken into consideration when deciding on the ceiling design.

That massiveness in architecture characteristic of theatres, auditoriums, hotels, churches and public buildings, can be nicely expressed by many of these Milcor Invisible Joint Combination Designs. Other Combinations will suit the requirements of stores, offices, restaurants, lodge rooms, dance halls, offices, and similar buildings. There are suitable combinations, too, for residences.

Milcor Metal Ceilings and walls are unique in their wide range of adaptability because each design is based on approved, authentic architectural motifs and every required unit for any shape of room is available.

"Invisible Joint" and "Lock Joint" Patterns

Designs are shown in both the "Invisible Joint" and the "Lock Joint" construction. "Lock Joint" Combinations will be found on Pages 32, 33, 76 and 77.

COLONIAL — DESIGN No. 2735

A beautiful, conservative Flush Back pattern, which meets the modern tendency toward simplicity.

Section No. 2

Combination Side Wall Designs

Panelled walls are much in vogue. Interior architecture is very effectively enhanced by adapting appropriate Milcor "Invisible Joint" panelling to the side walls. Perfect harmony of design between the Ceiling and the Walls is easily obtainable, as demonstrated by the combinations shown on the next fifteen pages.

Many combinations besides those shown here can be arranged, of course. These suggestions were planned to express as wide a variety of pattern combinations as possible. Many of these Side Wall Combinations are rather elaborate, but if more simple designs are preferred, it is an easy matter to adapt this idea very effectively to the most conservative Side Wall Plates, as well.

Wherever Metal Ceilings are used, Milcor Metal Side Walls should also be given careful consideration. They possess all the advantages of firesafeness, economy, beauty, sanitary superiority and low upkeep cost—the advantages which have made Milcor Metal Ceilings so popular.

They add a fine feeling of uniformity to rooms that have Metal Ceilings. They are the ideal type of wall where large rooms are subdivided into smaller rooms—for private offices, etc.—because they do not require costly, laborious partition construction and they can be changed around as requirements demand, without much trouble or interruption to regular work.

More Milcor Metal Side Walls would be used if the exceptional merits of this product were more generally appreciated. Give more consideration to these Metal Walls. They are stylish, accepted as good taste, thoroughly practical and always prove an excellent investment.

Wainscoting

Although the Wainscoting for Milcor Metal Side Walls can be made up of various Ceiling Plates, Panels, Borders, Moldings and Chair Rails, there are a number of regular Wainscot Plates which we carry in stock, as shown on the next four pages.

The wide variety of pleasing combinations which are made possible by the extensive line of Milcor Designs is an important factor to remember, for it offers a flexibility of treatment which lifts the completed job out of the "ready made" class and permits an exceptionally broad range of individuality.

Any Milcor representative can help you arrange suitable combinations for Wainscoting, Side Walls or Ceilings if you cannot decide on such combinations yourself. Or, if you will send to our Main Office or to any of our Branches, a description of the character of the building or room (whether it is a church, store, restaurant, entrance hall, dining room or whatever it may be) we shall be glad to suggest various appropriate, practical combinations.

When seeking advice or suggestions on combinations always give us exact dimensions and a rough sketch of the rooms (or better still, the Plans of the building) so that we can make our recommendations specifically for that job.

This is all a part of Milcor Service. Do not hesitate to ask for it. We maintain an efficient organization of experts for this sort of work and we expect you to make use of it. Let us help you work out your problems.

Vibrations and Strains From Settling of Buildings Do Not Affect Milcor "Invisible Joint" Metal Ceilings.

In buildings located on streets where there is any sort of heavy traffic—motor trucks, street-cars, etc.—the severe vibrations, jolts and jars to which the walls and ceilings are subjected, constitute a serious problem. Metal Ceiling-and-Wall construction offers the most satisfactory answer to this problem—for regardless of the amount of stresses, strains and vibrations which a building may undergo, Milcor "Invisible Joint" Metal Ceilings will stay in place and will never crack or become unsafe.

And even though a building may settle considerably, Milcor Metal Ceilings and Walls will never disclose this fact. Ordinary walls and ceilings with bad "settling cracks" are not only dangerous and unsightly, but they also contribute more than any other factor to depreciation in the value of the building. So it is highly desirable to avoid any possibility of having such cracks develop. The only truly satisfactory answer, to problems like these, is found through use of Milcor "Invisible Joint" Metal Ceilings.

Part of The Milcor Drafting Department — the first step in preparing orders for shipment.

Twenty-four Hour MILCOR Service

PRACTICALLY all shipments of Milcor "Invisible Joint" Metal Ceilings and Walls are started on their way within twenty-four to forty-eight hours after receipt of the orders and specifications.

Every order, upon arrival, is routed through our Ceiling-Drafting Department, where detailed Plan Specifications and Erection Blueprints are prepared. These specifications then go to our Ceiling Stockrooms—on the same day the order arrives—and all units are assembled, crated, and shipped direct from our own railway sidings; or, if Express Shipment is specified, prompt delivery is made to the Express Company by motor truck.

Our enormous warehousing facilities, experienced personnel and large organization make this service possible no matter how large or small the order may be.

Because of the wide scope of our operations, it is possible for us to carry complete stocks of all units in the entire Milcor Line. You don't have to suffer delays which would occur if various parts had to be made up to fill your orders.

Another thing you will appreciate in Milcor Service, is this: Whenever units are needed for replacements on Milcor "Invisible Joint" Metal Ceilings or Walls, no matter how many years have elapsed since erection of the original job, the replacements can be secured promptly from us. We protect you and your customers by never discontinuing any of our regular stock patterns after they have once been established as part of our line.

You will appreciate Milcor Service. So will your customers!

Individual Field Plates

Detailed information is given in this Section on the individual Field Plates embodied in the various Combinations shown in the preceding pages. For your convenience in locating Combination Ceilings and Sidewalls in which the various individual units are illustrated, we have indicated the pages on which such Combinations appear.

The depth and dimensions of each unit are given and the relief details are clearly shown, so as to convey a very definite idea of the actual plate. This simplifies the problem of choosing appropriate designs for various classes of buildings. So we suggest that you consult the individual Field Plate data always when making up specifications for any Combination Design.

No. 2700—Colonial Field Plate

24"x24" or 24"x48"; 3½ deep
8c per sq. ft.

Shown in Design on Page 14

This is the popular new 24-inch, flush back, Colonial Plate which has pleased Architects, Contractors and Owners because of the simplicity and dignity of the design itself, and because it produces such a satisfactory general effect after erection. This big 24-inch

conservative, Colonial pattern could be used nicely in many of the Colonial Combination Designs shown on Pages 15 to 42, as well as in several of the other Combination Designs shown throughout this Book. Keep No. 2700 in mind and use it wherever it seems desirable.

Re-Pressed Beads and Die-Cut Nail Holes

Milcor "Invisible Joint" Plates for Ceilings and Walls are squared and re-squared, so precisely that there cannot be any possibility of failure to match up when erecting.

The details of the designs are bold and clear and each plate is painted on both sides with a flat gray special paint which has a particularly strong affinity for the metal. This paint will not chip, check or peel.

The nail holes are die-cut — not mere perforations, but cut-out discs — and there are no ragged edges to cut the hands of the workmen who erect the ceilings. The holes are accurately placed, by precision machinery.

The beads are re-pressed, thus assuring perfect alignment of all units and lending a very neat, workmanlike appearance to the complete ceiling or wall.

Note: These features are embodied in most of our plates. There are only a few exceptions where the character of the design makes nail holes and re-pressed beads impractical.

Free Ceiling Plans

Wherever you have an opportunity to submit bids on ceilings or walls, you should take advantage of the Estimating Service which we maintain at no cost to you.

If you will just send us the measurements of the interiors for which an estimate is desired, we will make up detailed Blue Print Plans, free, with "lump sum" cost of Milcor Invisible Joint Steel Ceilings or Walls to cover.

Follow Building Operations

Keep in touch with all building operations. Get more than your ordinary share of this year's enormous building operations—over five billion dollars will be spent.

Buildings of the following classes can use Milcor Invisible Joint Ceilings par-

ticularly well: Theatres, Stores, Restaurants, Dance Halls, Lodge Buildings, Churches, Schools, Colleges, Institutions, Hospitals, Office and Public Buildings, Factory Offices, etc.

Watch construction—go after ceiling business, don't wait for it!

"Lock-Joint"

THE "Lock-Joint" is what is commonly termed a slip joint. Just turn to the next page, and you will see how the individual units slip into each other in this "Lock-Joint" design.

No cross-lurring strips are required—it is sufficient to have the strips running only one way. After "Lock-Joint" Plates are erected, no nail heads or nail holes are exposed. The locked seams cannot be detected, and for this reason the "Lock-Joint" is very desirable.

The Milcor "Lock-Joint" Plates can be easily and quickly applied and a neat, straight-lined ceiling is always the result, due to the careful workmanship which is characteristic of all units in Milcor Metal Ceilings and Walls.

Further details are given on Page 4.

Emblem Plates and Center Plates

These Milcor Emblem Plates are mighty fine for Lodge Rooms, Meeting Halls, etc., for they add a very satisfactory touch of distinctiveness to the ceiling or walls.

Authentic reproductions like these could not be secured in any other medium or product at such comparatively little cost. The Lodge Insignia and Emblems shown here are carried in Milcor stock but if there is any special design demanded, we can produce it at very reasonable cost.

Some lodges and organizations have purchased these plates made up in pure Zinc or pure Copper and have used them, framed, in various parts of their buildings. They could be used, too, in zinc or copper, for exterior architectural panels, built right into the exterior structure. In such cases, other Milcor Architectural Ornaments can be used very satisfactorily in obtaining pleasing exterior effects. Exterior ornaments made from Milcor Zinc or Copper will outlast the building itself. Such ornaments and panels for exterior use may be made also from rust-resisting ARMCO Ingot Iron, with every assurance that exceptionally long service will be obtained.

Marquees, or canopies, over the entrance of Lodge or Fraternity Buildings can be adorned with these special Insignia Plates.

If you haven't complete information on Milcor Architectural Sheet Metal, we shall be glad to send you a copy of our 64-page, 5-color data Book — "The Milcor Guide". Write for free copy.

Keep the Lodge Room looking at its best and attendance will be more satisfactory. Milcor Metal Ceilings and Emblem Plates are a constructive influence—they retain their appearance of newness and lend an atmosphere of cheer and success to the rooms. It pays to keep the Lodge attractive. Milcor Ceilings help do that.

In addition to the Lodge Emblem Plates shown here, we have Medallion Plates of George Washington, Abraham Lincoln, Woodrow Wilson and other famous Americans. We can make up other Lodge Emblem Plates, and any other special sculptural designs to meet any specifications.

Frequently the ventilation requirements of a room require an opening through the ceiling, so we have provided for problems of that sort by die-cutting various Center Plates, as indicated here. Milcor "Alpina" Syphon Revolv-

ing Ventilators or "Nu-Air" Stationary Ventilators are highly efficient and will insure healthful conditions. If you haven't complete data in your files regarding Milcor Ventilators, please advise us.

Miscellaneous Ornaments

Firesafe!

IN actual service, it has been demonstrated time and again that Milcor Invisible Joint Metal Ceilings act effectively as fire retardants. The metal deflects direct flames and tends to insulate the supporting structural work from the heat of a fire. But to determine the real resistance of these Metal Ceilings to fire, practical tests have been made by Associated Metal Ceiling Contractors of New York. These tests proved that metal ceilings are fire retarding and a great fire protection.

Official Test:

Subjected to a heat of 1700 degrees, metal ceiling on plaster board stayed in place one hour and fifteen minutes. Such protection would confine a fire to the room in which it started for

a period long enough to permit fire-fighting apparatus to get on the job. A plaster ceiling on wood lath, under the same condition, lasted only twelve minutes.

Many Instances Like This Prove That Metal Ceilings Are Firesafe

Milwaukee Corrugating Co.,
Milwaukee, Wisconsin.

Gentlemen:-

For your information we want to tell you that if it had not been for the metal ceiling in our shop, the fire loss we suffered January 2nd would have been several times larger.

The fire started in a floor-register above the furnace (from some unknown reason) but soon enveloped the entire shop in flames as the old floors and joists were oil soaked, as that room had previously been used for a machine shop. This room was 30'x33' and everything in it a total loss, racks, tools, floor, doors and door frames leading to main building 33'x80', two stories high, were burned. But, not one ceiling joist was even scorched, only two panels in whole ceiling opened up and if it had not been for this ceiling, we certainly would have been left out in the cold without even a roof above our heads.

We were able at once to go to work replacing joists and floor, and are now able, thanks to the Metal Ceiling, to begin our regular work with new tools, new stock but the same old ceiling. Our loss was about \$4300.00.

This is one reason why you received our order for metal ceilings for our show room and office. Without a question, metal ceiling does the work during a fire and certainly adds to the attractiveness of the place.

Yours truly,

(Signed) Rumps Furnace & Hdwe. Co.

Section No. 6

Pages 203 to 252

Borders, Corners, Spacers, Fillers, Cornices and Mitres

The illustrations of the units on the next fifty pages not only have been arranged to show plainly the details of design and the unit-specifications, but have been placed on the pages in such manner as to show the relative positions of the various parts when erected.

You will appreciate this feature of your Milcor Ceiling Catalog when questions arise as to how the various units should be assembled and erected. Whenever in doubt, consult this Milcor Book first. We have tried to make the arrangement of all units so plain with relation to each other, that there can be no question as to how or where to use them. This helps to simplify erection.

For your convenience in locating those pages showing Combination Ceilings and Side Walls in which these individual units are illustrated, we have indicated below the various units the page numbers on which such Combinations appear. You will find that this idea makes your Milcor Metal Ceiling Catalog very convenient to work with.

Cornices and Mitres

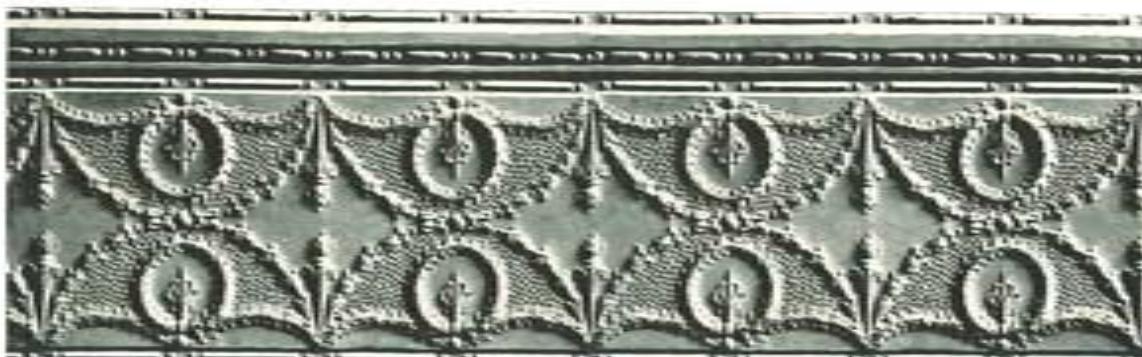

Pages 242 to 252

Our method of illustrating Cornices and Mitres as though erected, eliminates any possibility of misunderstanding which mitres are supposed to be used for inside corners and which are for outside corners. And there can be no danger of getting the Cornice upside down, either, if the men who are erecting them consult these illustrations.

This section showing Cornices and Mitres is really one of the *service features* of this Catalog. While it was a difficult task to accomplish this effective presentation (which is an original, exclusively Milcor idea), the results are so practical that the effort now seems well worth-while.

Always consult this Section of the Milcor Ceiling Catalog when ordering Cornices and Mitres, and again when erecting them.

12"x12"; $\frac{3}{8}$ " deep
\$10 per sq. ft.

NOTHING can take the place of well designed metal ceilings and walls. No other type of wall or ceiling embodies all these advantages of beauty, firesafeness, freedom from cracking, general safety, economy of erection and permanence.

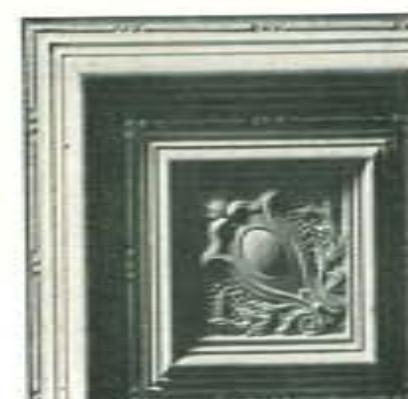

As the merits of this type of interior construction become more generally appreciated, Milcor "Invisible Joint" Metal Ceilings and Walls are being demanded for practically every class of building. Their use in homes is steadily increasing, too.

And now that home builders are paying more attention to the finishing of rooms in the basement, for use as billiard rooms, dancing rooms, etc., the superiority of this type of metal construction assumes still more importance. Milcor Metal Ceilings and Walls are positively without equal as an interior finish under conditions such as are encountered in house basements.

The fire protection afforded to the rest of the house by metal basement ceilings is an exceedingly important factor to consider.

No. 2116
12"x24" or 12"x48"; $\frac{3}{8}$ " deep
\$10 per sq. ft.

No. 2116-A
16"x16"; $\frac{3}{8}$ " deep
\$10 per sq. ft.

No. 2116-B
24"x24"; $\frac{3}{8}$ " deep
\$10 per sq. ft.

On Page 202, the value of Milcor "Invisible Joint" Metal Ceilings from the standpoint of protection from fire, is impressively emphasized. There is a great deal of satisfaction in knowing that this protection, plus good appearance, safety from cracking or falling, and lowest possible maintenance cost are combined in this ideal metal finish for walls and ceilings.

No Delays! Your Order is Ready in 24 Hours

The Milcoor Service System is speedy and thorough. Your order arrives for a ceiling. It goes direct to our Ceiling Sales Division. It is routed through the Ceiling Drafting Room for Plan Specifications on each job. These specifications, with the order, reach our Ceiling Factory Stockrooms on the same day your order arrives. The ceiling plates, fillers, cornices, center plates, etc., (if these are included on the job) are assembled and crated—then promptly carried by electric trucks to our own railway siding or to the shipping platform for Express shipments.

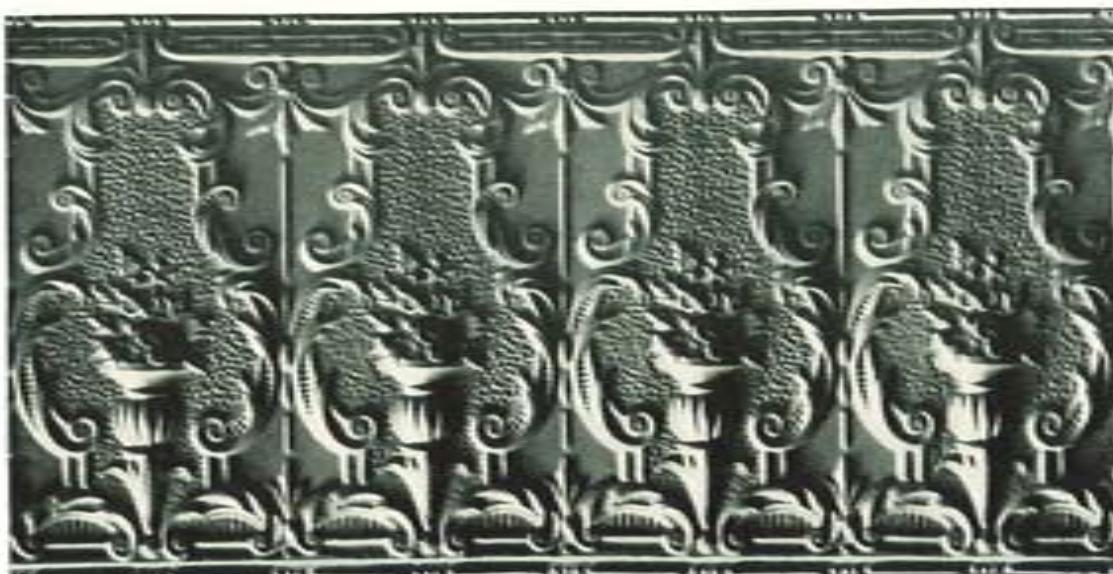

This service is accomplished within twenty-four to forty-eight hours. Your order—complete—is on its way without delay. You receive our blue print plans and specifications to follow for erection of the ceiling when the material arrives.

The elimination of delay in the Milcoor System for handling your orders for "Invisible Joint" Metal Ceilings will be the source of much satisfaction to you. Not only that, but you will find also that it pays to be able to count on this sort of service.

From long years of experience we have learned the importance of speeding up the actual shipment of the ceiling stock, together with detailed erection plans, without delay after receipt of the order and specifications. We realize what serious consequences may develop if your customers are obliged to wait for a job. We know why you need quick deliveries and we are prepared to give them to you.

This Speedy Service is Unfailing!

Organized to Maintain Speedy Service

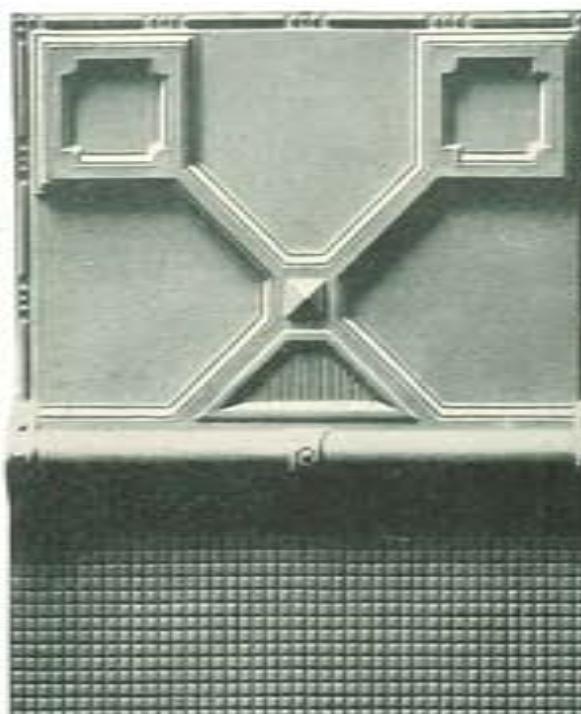

It has taken years of systematic organizing to bring about unfailingly prompt handling of every Invisible Joint Ceiling Order, step by step, uninterrupted, with twenty-four to forty-eight hour service assured. We are organized to MAINTAIN this service steadily.

Years of experience help us to gauge the amount of stock we should keep ready in various designs. The most ex-

tensive manufacturing facilities have been developed. Enormous stockrooms are efficiently arranged so as to avoid loss of time. A wide variety of designs in ceiling plates, wall plates, cornices moldings, etc., are available for the most discriminating tastes—and the stocks are kept ready.

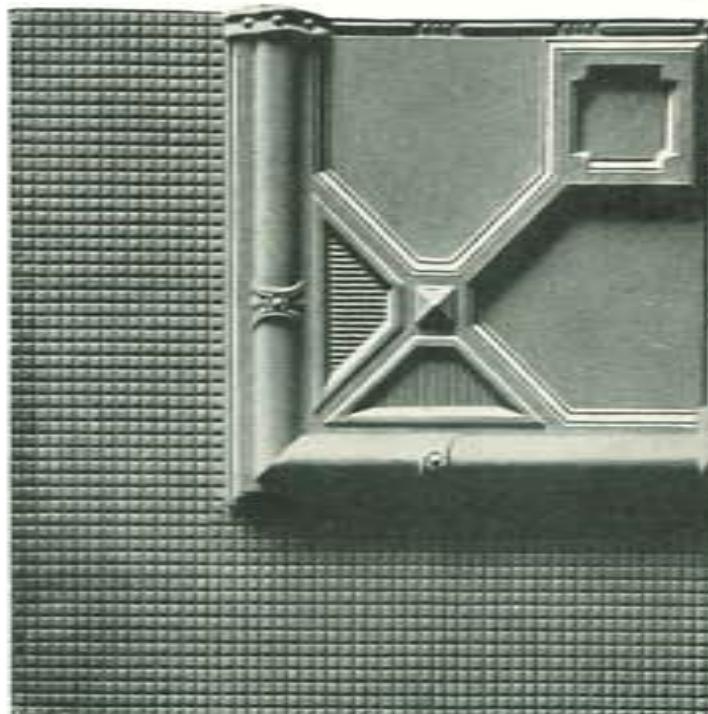

This all required foresight, proper management, and efficient organization. Here it is—at your service.

MOLDINGS

No. 1821—4 $\frac{1}{2}$ "x48", 3 $\frac{1}{2}$ " deep
5c per lin. ft.
Shown in Designs on Pages 30, 37 and 39.

No. 1821-L—4 $\frac{1}{2}$ "x4"
5c each

No. 1821-T—4 $\frac{1}{2}$ "x4"
5c each

No. 1821-X—4 $\frac{1}{2}$ "x4"
5c each

No. 1823—4 $\frac{1}{2}$ "x48", for Chair Rail
5c per lin. ft.

Shown in Designs on Pages 146, 147 and 148.

No. 1823-A—5 $\frac{1}{2}$ "x48", for Foot Molding
7c per lin. ft.

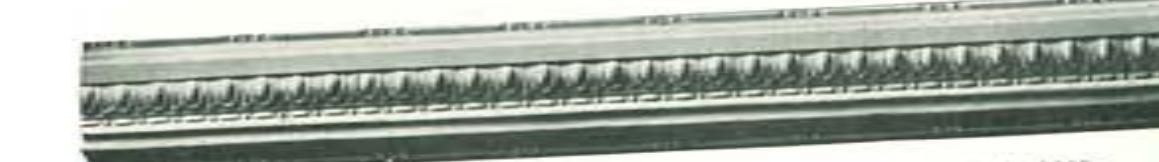

No. 1723—5 $\frac{1}{2}$ "x48", for Chair Rail or Foot Molding
7c per lin. ft.
Shown in Designs on Pages 143, 144, 145, 152 and 159.

No. 2123—4 $\frac{1}{2}$ "x48", 3 $\frac{1}{2}$ " deep; for Chair Rail
5c per lin. ft.
Shown in Designs on Pages 131, 132 and 133.

No. 2123-A—6 $\frac{1}{2}$ "x48", 3 $\frac{1}{2}$ " deep; for Foot Molding
8c per lin. ft.
Shown in Designs on Pages 152 and 153.

No. 1923—4 $\frac{1}{2}$ "x48", for Chair Rail
5c per lin. ft.

Shown in Designs on Pages 146, 148, 149, 152 and 153.

No. 1923-A—5 $\frac{1}{2}$ "x48", for Foot Molding
7c per lin. ft.

No. 1922—3 $\frac{1}{2}$ "x48"
5c per lin. ft.

Individual Side Wall Plates

Detailed information is given in this Section on the Individual Side Wall Plates which are embodied in the Side Wall Combinations in Section No. 2, Pages 141 to 156, as well as in some of the Ceiling Combinations. To facilitate reference to Combination Designs in which these units are shown in this Book, we have indicated under the various units the pages on which such Designs appear.

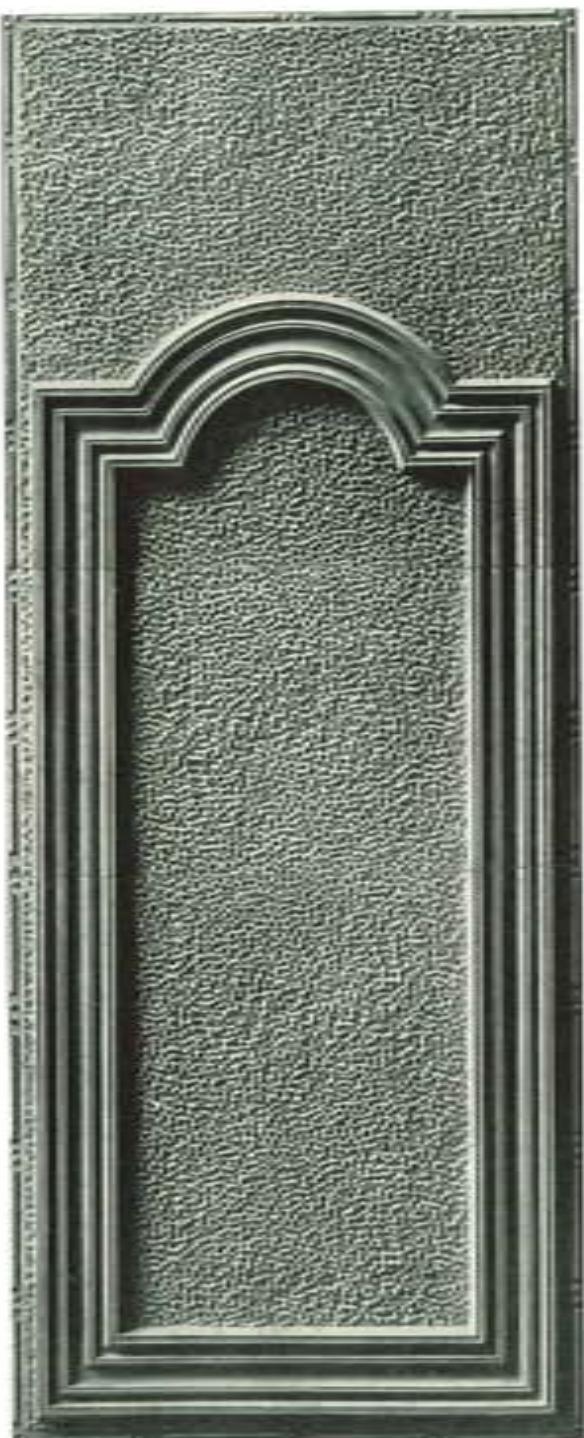

The depth and dimensions of each unit are given and the relief details are plainly illustrated, so as to convey a very definite idea of the plate itself. This simplifies the problem of choosing appropriate units for various classes of buildings. So we urge that you consult this Section on Individual Side Wall Plates always when making up Specifications.

May we also suggest that Page 141 be referred to always when the subject of Ceilings or Side Walls is under discussion. There are some valuable suggestions on that page.

Milco "Invisible Joint" Metal Ceiling and Walls—Lutheran Church, Juarez, Nefr.

SELF-FURRING, "CONTINUOUS CEILING PLATE."

24" x 96". Each panel is 12" x 24"

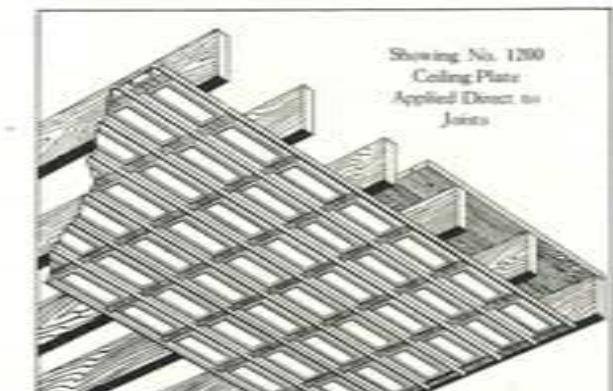

Adaptable to joists spaced 12", 16" or 24" apart

Be per Sq. Ft.

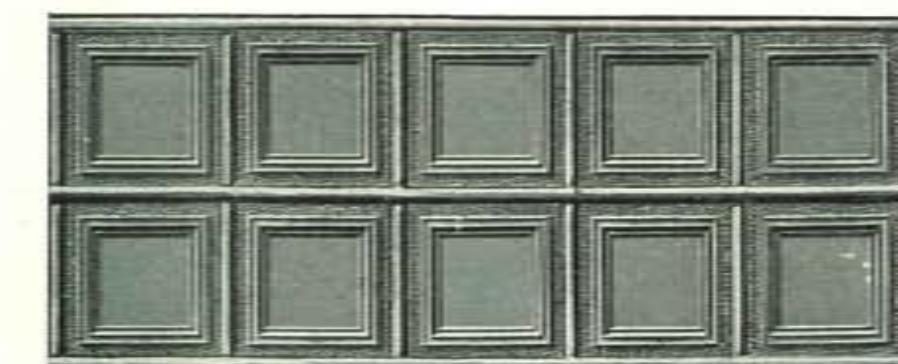

Shown in Design No. 1290 on Page 138.

NO. 1200 Ceiling Plate is designed for use in factories, warehouses, storerooms, basements, garages and other places where economy is one of the first considerations.

The pattern is designed so as to permit a 2 inch adjustment of the plates, lengthwise (shorter or longer as required), to conform to the variation in spacing between joists when erecting. Such adjusting in length can be made without any noticeable difference in the general design. When thus adjusted, the end panels come an inch further apart or an inch closer together, as the case may be, to get the ends of the plates to lap on a joist.

Model Building Code

Metal ceiling over wood joists. When metal ceilings are applied over wood joists, they shall be put up on seven-eighths by one and one-fourth inch wood strips placed six inches on center and run crosswise on the joists. These strips shall be fastened with 8d barbed or cement coated nails. The metal ceiling shall be applied to these strips with one inch cone headed barbed ceiling nails, and the joints of such metal ceiling shall be tightly dressed. Plastering shall not be required back of metal ceiling.

When metal ceilings are to be applied on joists without using furring strips, the design should be such as to permit adjustment lengthwise to compensate for variations in spacing of joists.

Metal ceiling over board or sheathed surface. Metal ceiling shall be applied over wood sheathing or board surface with one inch special cone headed barbed ceiling nails, and the joints of such metal ceiling shall be tightly dressed.

Metal ceiling over old plaster. When metal ceiling is applied over old plaster, seven-eighths by one and one-fourth inch wood strips shall be used six inches on center running crosswise on the joists and fastened with 8d barbed or cement coated nails. Metal ceiling shall be applied to these wood strips with one inch barbed cone headed ceiling nails, and the joints of such metal ceiling shall be tightly dressed.

Metal ceiling over concrete. When metal ceiling is used over concrete, keyed wood strips are to be laid in the form before the concrete is poured, and seven-eighths by one and one-fourth inch wood strips are to be fastened crosswise to these strips six inches on center. The metal ceiling shall be applied to these strips with one inch special cone headed barbed ceiling nails, and the joints of such metal ceiling shall be tightly dressed.

Lock-Joint Plain Steel Tile

MILCOR Lock-Joint Plain Steel Tile and Trimmings are ideal for finishing walls of Bathrooms, Kitchens, Vestibules, Restaurants, Barber Shops, Lavatories, etc., because these metal walls not only look neat and clean, but actually are the most sanitary type of construction available. They can be more easily cleaned than any other wall finish. They remain fire-safe and crack-free; they are unaffected by steam, changing temperatures or excessive moisture. They weigh less and cost less than vitreous enameled tile and can be much more easily installed. These metal walls will outlast the building itself.

Milcor Plain Steel Tile should be erected on boarded or flat surfaces only, to insure a smooth, true tile effect. The sheets interlock so that no seams are visible. Outside and inside corner pieces are furnished as shown below.

MILCOR

Architectural Ornaments
and Other Milcor Metal Building Products

TO MEET the demands for architectural sheet metal ornaments on various types of buildings in the most practical manner, we have designed and produced thousands of artistic units, a few of which are shown here. The dies for these thousands of ornaments are at our Milwaukee Plant, and we can furnish the ornaments promptly in Zinc or Copper. You will find that it

pays to examine what we have, for we can usually show you exactly the ornaments you want — or we can make them up specially in any original designs specified.

We solicit your consideration of our excellent facilities for this sort of work and we can assure you of very satisfactory service.

MILCOR Sheet Metal Marquees or Canopies.

HEAVY cast iron Marquees over entrances to buildings are no longer considered safe or desirable. That type of Marquee was clumsy in appearance, dangerous because of its ponderous weight, unduly expensive, difficult to erect and altogether impractical for most buildings.

Milcor Sheet Metal Marquees or Canopies, eliminate all these objectionable features. They permit a fineness of design which is impossible of attainment in other materials. They weigh only a fraction as much as cast iron types, thus relieving the building of considerable strain and making the entrance safer. When made of Pure Copper, Milcor Marquees are everlasting. When made of Open Hearth Galvanized Steel or Galvanized Coppered-Metal, or pure ARMCO Ingot Iron, they can be preserved indefinitely by occasional painting—less frequent painting than is ordinarily required for cast iron types.

In spite of better appearance and such important practical advantages, Milcor Metal Marquees cost less than other types of Marquees.

We have specialized on this type of work and can point to many fine examples where much money was saved and unequalled artistic effects were produced by our methods. We are in position to submit appropriate designs and work out all details for any style of building if front dimensions and sizes of openings of structure are specified. Or we can follow the architect's layout and details precisely.

We build Marquees complete, ready to erect. Write for specific information and estimates whenever you have a Marquee problem to solve.

The Turner Residence at Two Rivers, Wis., Milcor Spanish Metal Tile laid by R. G. Saettiger, Contractor

A Better Roof was Never Built

MILCOR "TITELOCK"
SPANISH METAL TILE

MILCOR "TITELOCK"
AMERICAN METAL TILE

It's in Style! Milcor "Titelock" Spanish Metal Tile expresses most beautifully the charm of quaint old Spanish Roofs. In oxidized copper, or in steel or ARMCO Ingot Iron, painted red, green or any color desired, the architectural beauty of this metal roof is beyond compare.

It is Safe! Each unit of Milcor Metal Roofing locks tightly into adjoining units, in such manner that a positively storm-tight roof is the result. Driving rains, snow, ice or steady drizzling rains—all are positively locked out by the Milcor "Titelock" construction. Not a nail hole is exposed. The protective armor is unbroken. It protects against fire and lightning, too—an advantage possessed by no other type of roofing.

It Lasts! Milcor Metal Roofing outlasts the building. In copper it lasts forever. Freezing in winter can't break this tile. Settling strains or vibrations can't crack it, either.

It is Economical! Heavy substructure is not required. This means a big saving. And maintenance cost is less, too.

These are practical roofs. Do not confuse Milcor "Titelock" Metal Roofs with ordinary metal roofing. Investigate!

Milcor Spanish Metal Tile, American Metal Tile, Metal Slate and Metal Shingles are made from Terne Plate Painted Red or Green, Terne Plate Galvanized, Pure Zinc, Pure Copper or

Rust-Resisting

Easily Erected

Any workman can lay a Milcor "Titelock" Metal Roof. No special tools are required. No soldering either. Less labor is required, ordinarily, than in laying wood shingles.

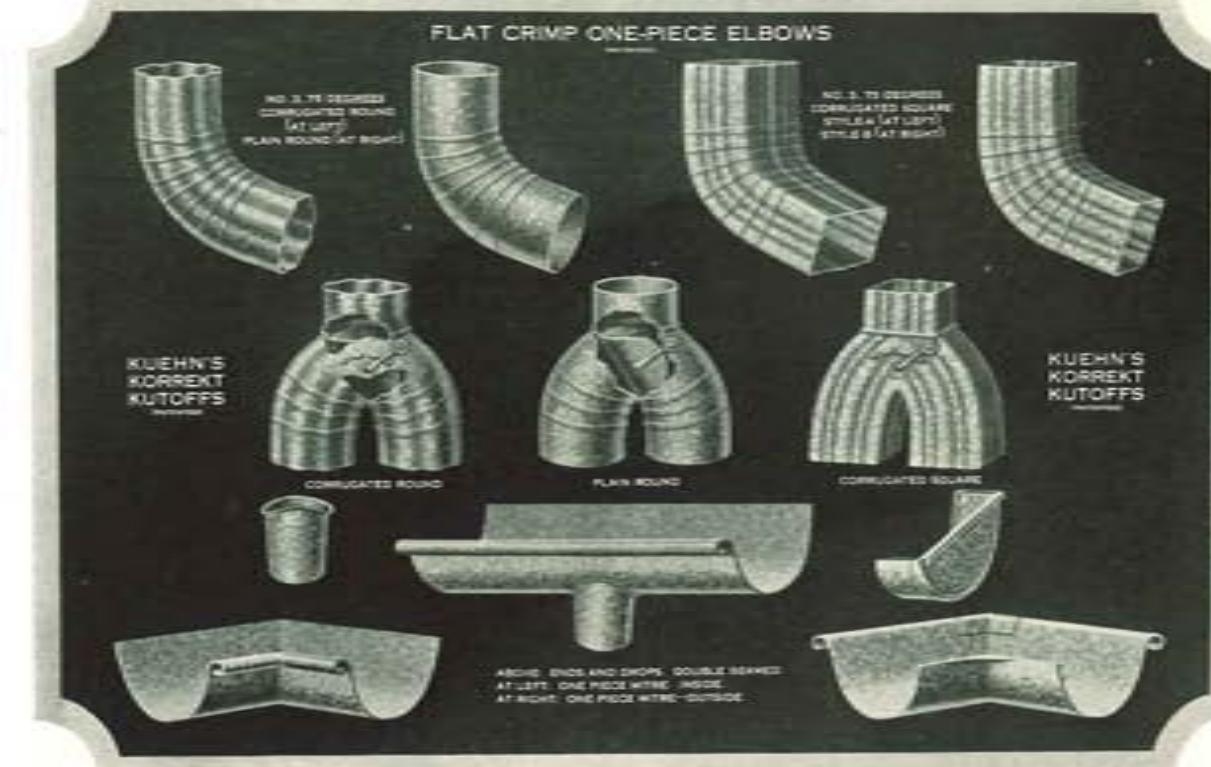

Comfortable!
The big air pockets under Milcor Spanish Metal Tile form an insulating blanket which effectively protects the building against heat in summer and cold in winter.

Eaves Trough and Rain Conductor Pipe

THE Milcor Line of Eaves Trough, Conductor Pipe and Trimmings is the most popular in this Industry. Uniform high quality materials and thoroughly practical mechanical designs make these products so satisfactory from the standpoint of service, erection and fine appearance that, in order to keep pace with the demand, our capacity has been developed so extensively that we now produce 50 million feet of these items annually — the largest production in the world of this line of sheet metal building products.

Made in Galvanized Steel, Galvanized "Coppered Metal", Galvanized ARMCO Ingot Iron, Pure Zinc or Pure Copper.

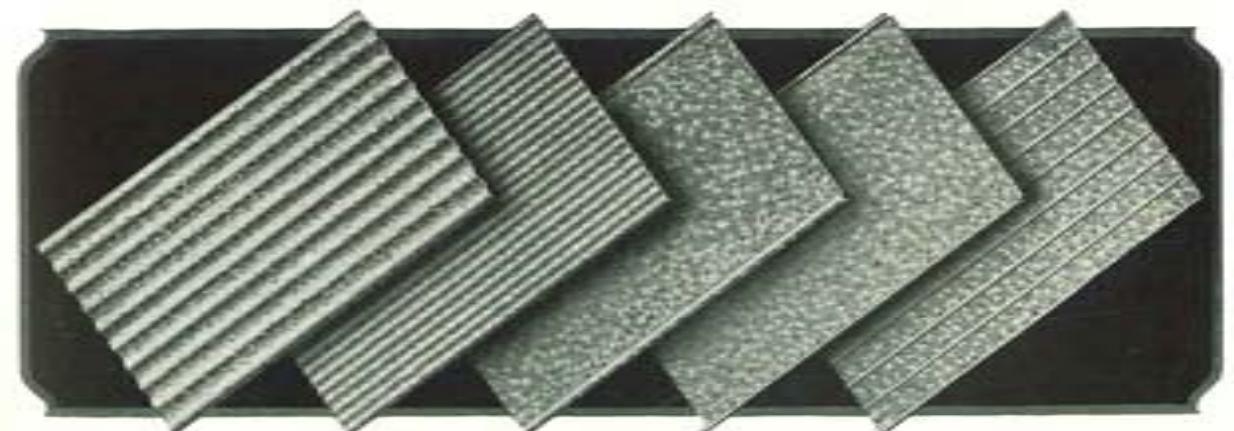

Rain Carrying Equipment—Unequalled for Quality and Completeness

Uniformly dependable quality, practical, patented designs, and a progressive organization—policy to maintain speedy service—backed by the good judgment of the Building Trades and the Public—have been responsible for the extensive use of Milcor Products and the great growth of this Company.

The Milcor Line of Rain Carrying Equipment is complete in every detail and meets every requirement for efficiency in erection.

Furnished in Galv. Steel, Galv. "Coppered" Metal, Galv. ARMCO Ingot Iron, Pure Zinc, or Pure Copper.

— and a Complete Line of Highest Quality Corrugated Roofing and Siding and Roll Roofing

MILCOR "Alpina" Revolving Industrial Ventilators

THE remarkable efficiency of the Milcor Alpina Siphon Revolving Ventilator lies in its sensitiveness and obedience to air currents. The revolving part runs on brass ball-bearings, completely encased and weather-protected. The unique design prevents back-draughts. The siphoning power is produced by the rush of exterior air currents entering between the flaring apertures at base. These air currents pass over end of flue and create a vacuum which pulls out the foul air from the building. Thousands of Milcor Alpinas are in use on all types of buildings.

Made in 10 standard sizes from 10" to 48", in Pure Copper, Galv., ARMCO Iron, Galv., "Coppered Metal", or Galv. Steel. Write for Catalog 24, containing complete details.

"Nu-Air" Ventilators

Milcor Nu-Air Stationary Ventilators possess great exhaust capacity and strength. The sloping dome keeps out rain, snow and sleet. The corrugated weather-band adds strength and rigidity and affords great vacuum-creating power. Outer air currents rush in between weather-band and deflector, traveling upward and outward and thus drawing impure air out of the building.

Patented Oct. 21, 1923

The Alpina is ruggedly built and rigidly braced throughout. It is trouble-proof and insures ventilation satisfaction from every standpoint. Standard sizes, 12" to 36" (diameter of roof opening). Special sizes can be made up to meet any specific requirements. Furnished in Pure Copper, Galv., ARMCO Iron, Galv., "Coppered Metal" or Galv. Steel. On all galvanized grades, braces are galvanized after formation.

MILCOR "Puttyless" Skylights and Ventilating Skylights

Milcor Puttyless Skylights represent a distinct step forward in skylight construction. Because of their practical design, the glass is held securely in place, permanently leak proof, without the use of any putty. Putting glass into ordinary skylights requires much time and skilled labor, and replacements are difficult as well as costly. Milcor Puttyless Skylights eliminate trouble and insure economical service. Write for complete details.

Milcor "Torpedo" Ventilating Skylights are the ideal solution for problems demanding a combination skylight and ventilator.

MILCOR Barn Ventilators

The mechanical superiority of the Milcor Barn Ventilator is indisputable. All steel base, heavily braced, every detail well designed and sturdy built. Can be used either with or without complete ventilating system. Catalog 24 contains detailed information.

MILCOR

"Titelock" Stove Pipe and Elbows

A LL Milcor Stove Pipe is full 24 inches in length, uniform deep blue in color, and is full weight in the various gauges. The Milcor Titelock feature is a very simple and a most effective locking device, positively preventing any possibility of collapse of the pipe, either inward or outward.

The Milcor Titelock runs the full length of the pipe-seam and can be cut at any point without requiring rivets to secure a continuously tight seam.

This Titelock feature permits convenient nesting of Milcor Stove Pipe for shipment. The pipe can be easily assembled on the job.

Milcor Service insures deliveries ON TIME.

Metal Lath and Allied Products

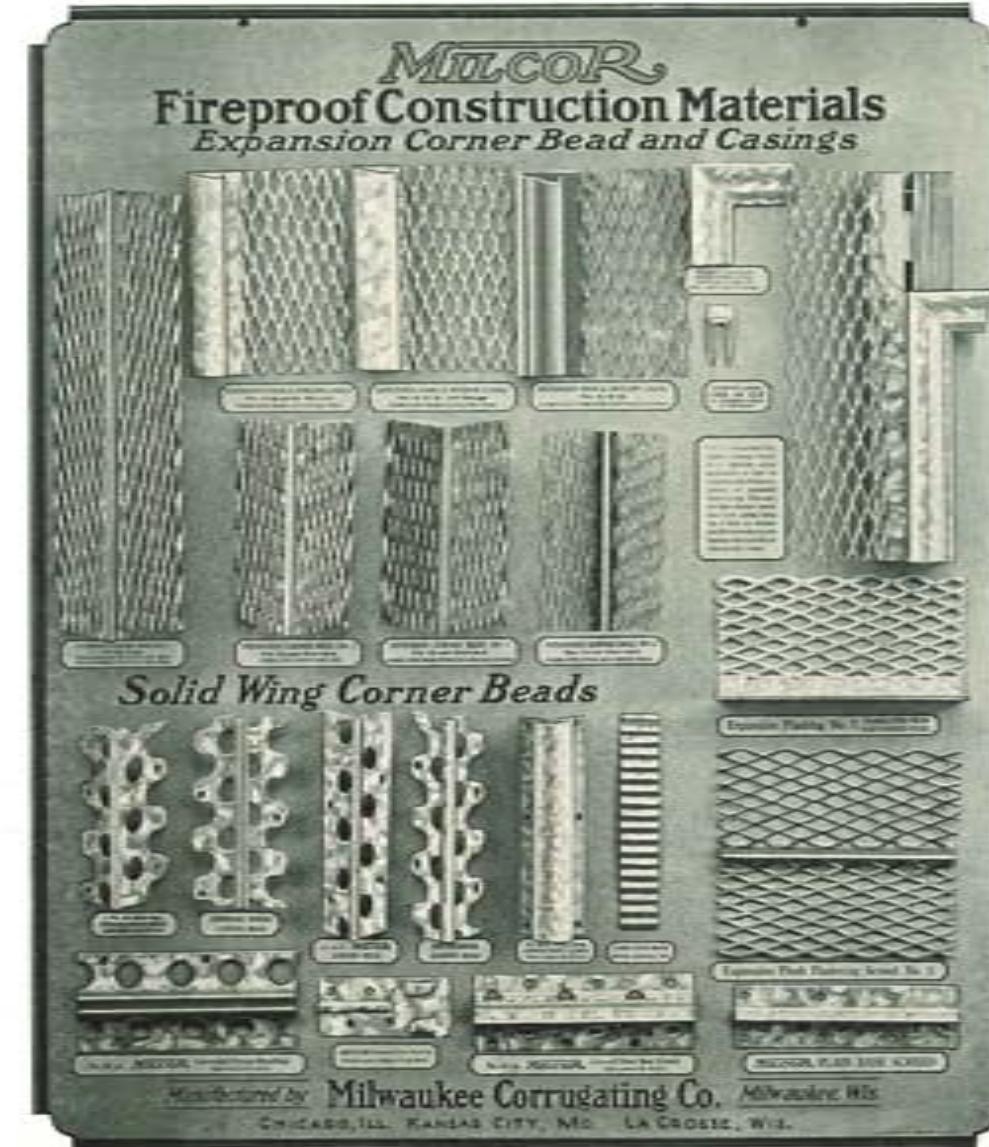

FOR complete details on the Milcor Line of Metal Lath and allied products, refer to our Catalog No. 20, "The Milcor Manual". A copy will be sent, on request, if you haven't one now.

Another famous Milcor Book which will prove valuable to anyone interested in safe plaster construction, is entitled: "Modern Modes in Better Plastering". We shall be glad to send this also on request.

Milcor Stay-Rib and Milcor Netmesh Metal Lath have earned the distinction of being the most practical lath available for plastering. The expanded metal serves as reinforcement, prevents cracks from developing and offers the most effective protection against fire.

Milcor Stay-Rib No. 1 and Milcor 5/8" Stay-Rib No. 2 are made from Steel, "Coppered Metal", or ARMCO Ingot Iron. Milcor Netmesh Metal Lath is made from Steel, "Coppered Metal", ARMCO Ingot Iron, pure Zinc, or pure Copper. Complete data in Catalog No. 20.

The illustrations on this page and the next, show some of the important items in this Division of the Milcor Line. Many of these products are distinctively Milcor and are patented. Samples of these products can be mailed conveniently and we shall be glad to send them to anyone interested in better plastering. Prominent Building Supply Dealers throughout the Country have these Milcor sample displays in their Offices and will be glad to show them to you at any time.

Corner Bead, Casings, Scree, etc.

Nothing else can take the place of Milcor Patented "Expansion" Corner Beads for inner and outer corners, "Expansion" Casings for door and window trim, and "Expansion" Base Screed. These products are now considered essential to Better Plastering and the most experienced Architects, Engineers, Contractors and Plasterers throughout the Country insist on genuine Milcor Products because of the superior results and ultimate economies which they make possible.

Many millions of feet of "Expansion" Corner Bead, "Expansion" Base Screed and "Expansion" Casings are now protecting plaster in the finest

buildings in the Country—buildings of all types, from homes to skyscrapers. The Roosevelt Hotel, New York; Atlanta-Biltmore, Atlanta, Ga.; Morrison, Palmer House, Stevens and Sherman Hotels, Straus Bldg., Eitel Bldg., Chicago; Benj. Franklin Hotel, Philadelphia; Radisson Hotel, Minneapolis; Wade Park Manor, Cleveland; and hundreds of other of the finest and most modern buildings of recent years, as well as thousands of homes, are protected by these unequalled Milcor Products.

Complete details in Catalog No. 20—"The Milcor Manual"—Samples on request.

Distributors and Dealers throughout the U. S. A., equipped to render A-1 service

The Latest *MILCOR* Development

BELIEVING sincerely that there is no adequate substitute for well designed metal walls and ceilings, *Milcor* set about to create a new pattern in keeping with the modern tastes and following the style set down by the present day architect. Rough textured plaster was a keynote, and so *Milcor* engineers determined to reproduce it in enduring metal.

The result was *Milcor* Spanish Texture . . . and its success was instantaneous. Contractors and

building owners sensed immediately the far-sightedness of the step. Now Spanish Texture has found its way into almost every type of building requiring metal walls and ceilings. It is the newest . . . most remarkable and interesting design ever offered by *Milcor* in metal walls and ceilings. There are, however, many other attractive

*A new design of unusual Beauty
in Metal Walls and Ceilings . . .*

Spanish Texture

for Rough Texture Color Toned
Walls and Ceilings in the Modern Mode

With Spanish Texture . . .

Milcor answers the question, "What will the metal walls and ceilings of tomorrow be? It is definitely a step into the future. Its striking beauty . . . its architectural charm . . . its modernizing influence, widens the use of metal walls and ceilings to far greater dimensions. New markets . . . new applications . . . new fields fall before its undeniable attractiveness. Places where metal walls and ceilings were heretofore inappropriate blend with the pleasing pattern of this new sanitary . . . fire-safe covering.

Milcor Spanish Texture, properly decorated over an old ivory base, so closely resembles real rough textured plastering, that it can only be distinguished upon close examination. This exactness of reproduction . . . this turning to the modern trend for design marks the beginning of a new period of popularity . . . which is destined to keep Milcor metal walls and ceilings in their rightful position as one of the most

economical means of achieving permanent, fire-proof interior beauty.

Old buildings and new buildings alike lend themselves to the use of Milcor Spanish Texture . . . Stores, theatres . . . halls and other public and semi-public buildings present a remarkable opportunity for this method of low cost finishing. It is permanently free from wall crack troubles . . . It is easily cleaned . . . and demands no repair or upkeep expense.

Spanish Texture is made with a special offset lap-joint, which provides a tight, mechanical fit between sheets. The pattern of individual plates exactly registers at the joint with adjoining companion plates. Thus the embossed surfaces and recesses blend one with the other into a continuous design.

May we send you a sample of Milcor Spanish Texture so that you may see for yourself what a truly significant step it is in the design of metal walls and ceilings?
